

Generation II – SID Road Safety Display

Generation II – SID Road Safety Displays now have increased on site flexibility through removal of the internal battery and the new specifically designed mounting bracket.

The bracket can take a large 12V 18Ah battery providing longer (10 days) life and the ability to easily interchange the battery to maintain the display for continued repeat use.

Securely locked into place the mounting bracket comes with options for stud mounting (as in photos) or post band fitting, allowing fitment to many size posts.

Once installed the display will remain activated for 10 days. To continue use simply release padlock and insert a fully charged battery.

As SID no longer has any internal batteries the unit only weighs 7Kg, with built in carry handle making the Traffic Technology Ltd SID Speed Indication Display the most portable active safety display.

In addition, the ability to change batteries allows for continued use without the need to remove the unit from site.

Available from January 08
